

A delivery note is supplied with each delivery of bricks indicating the type of brick supplied.

The properties of this type of brick are specified on the goods declaration attached to the packaging.

If documentation is also required, a certificate can be requested in which the type of brick is related to the specific construction.

We also suggest using the following mortars:

KC 50/50/700

for the following brick types:

D23, D31, D32, D33, D34, D35, D36, D37, D38, D39A, D39B
D51, D54, D70, D71, D72, D73, D76, D78, D81, D91, D98.

KC 35/65/650

for the following brick types:

D42, D43, D46, D47, D48, D49, D55, D58, D92, D96, D97, D99.

If the consultant has prescribed a specific mortar, this of course takes precedence over the above recommendations.

We also recommend following the guidelines in the current standards and books. The mortar supplier will be able to advise which mortars correspond to the above.
